JIRA (Browsing a Project Summary)

Browsing a Project’s Summary

What is Project Summary?

Project Summary shows users a high level overview of the different aspects of a project and recent activities in the project. It also shows a list of versions and issues that are due within a project.

Below is the list of basic options that a user can find in the Project Summary page. There can be other options added to this list for ex roadmap,change log etc and for some projects all the below options may not be present.

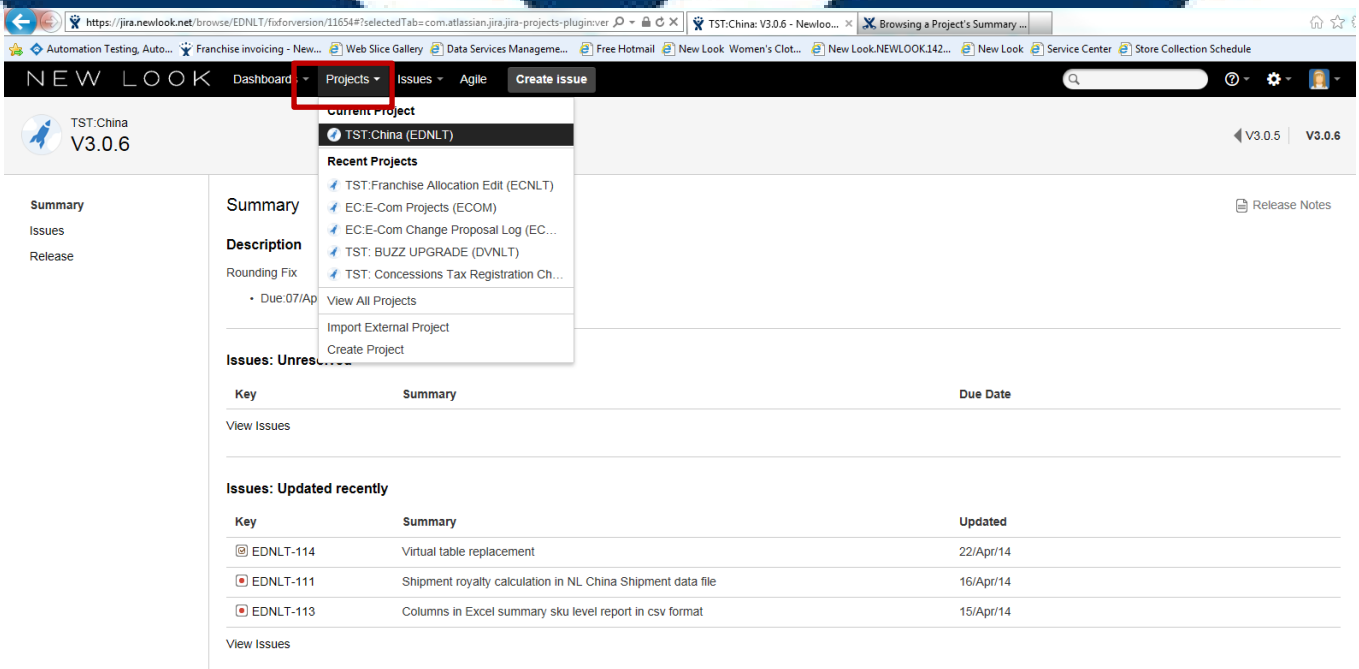
Browsing a Project's Summary

- To browse a project's summary,
- On the top navigation bar, click the white triangle next to Projects. The projects dropdown will display.

Tip: You can access your current project directly by simply clicking the Projects link instead of the triangle.



User displayed below screen when Projects link is clicked. Ensure that the Summary tab page is displayed if not click the Summary page on the left to show the page.

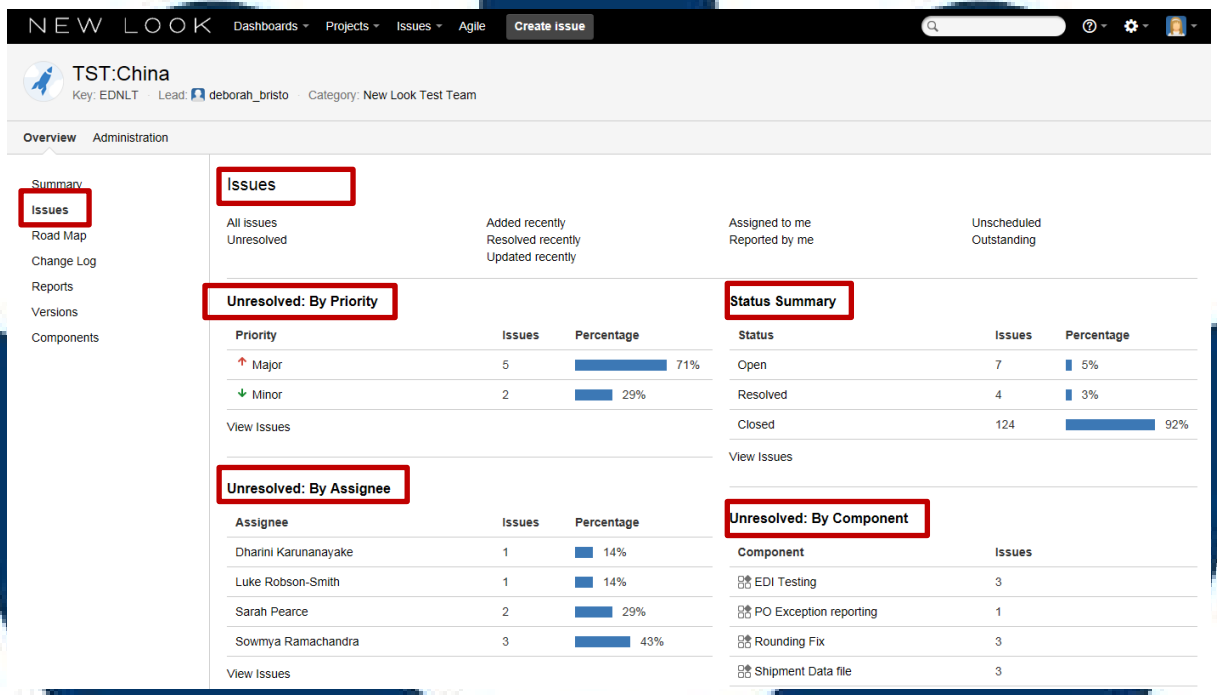
Users will be able to see the different issues for a project based on a specific version of code released into Test. Each code fix will be released into versions and a user can view defects based on which version they are included

Browsing a Project's Summary

Browsing a Project's Issues



User can select **Issues** from the left hand pane below Summary option under Overview tab

User can view Issues selecting any one of the below options as highlighted in the screenshot

Unresolved: By Priority – this option helps user to look at issues based on priority of the issue ie. Major, Minor, Critical, Blocker, Trivial

Unresolved: By Assignee – this option helps user to view issues based on the different assignees to the project usually sorted in alphabetical order

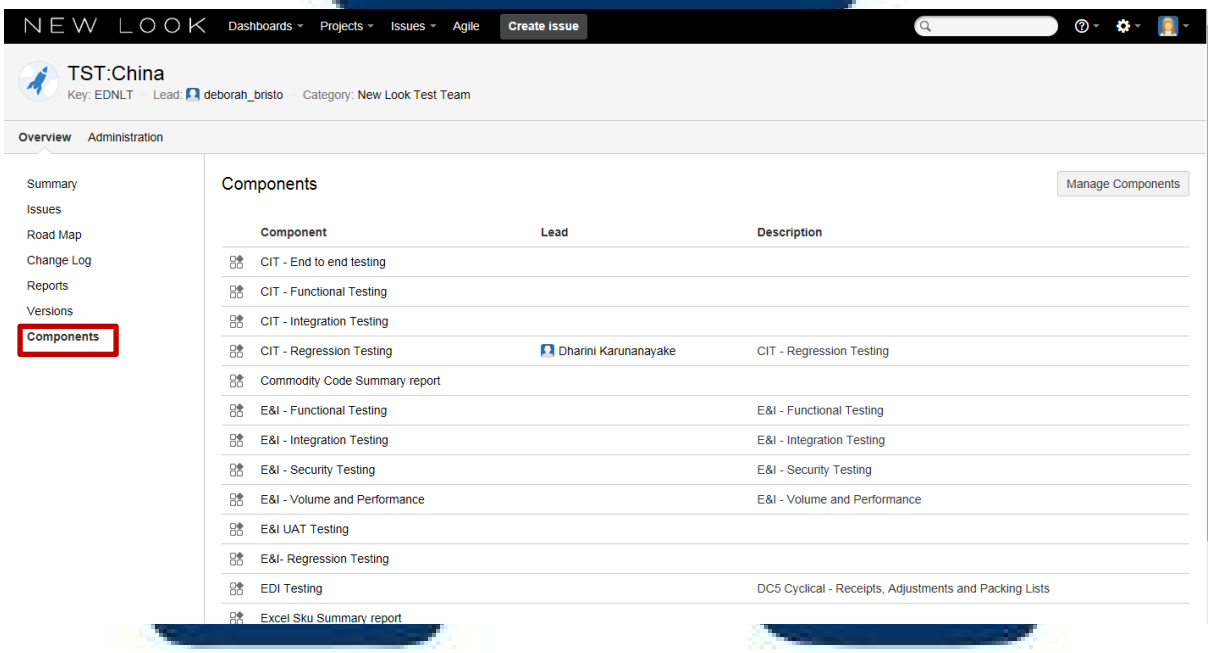
Unresolved: By Status Summary – this option allows the user to see issues based on the status of the issue ie. Open, Resolved, Closed, Re-opened

Unresolved: By component – this option allows the user to view issues based on the different components that are added to a project.

Unresolved: By Issue type – this allows the user to view issues based on the different issue types ie. Bug, Issue, Question, Task etc

Unresolved: By Version – this allows the user to view any issues based on the version number of the issues for a project. This option helps if the user needs to see issues for a specific version of the code released

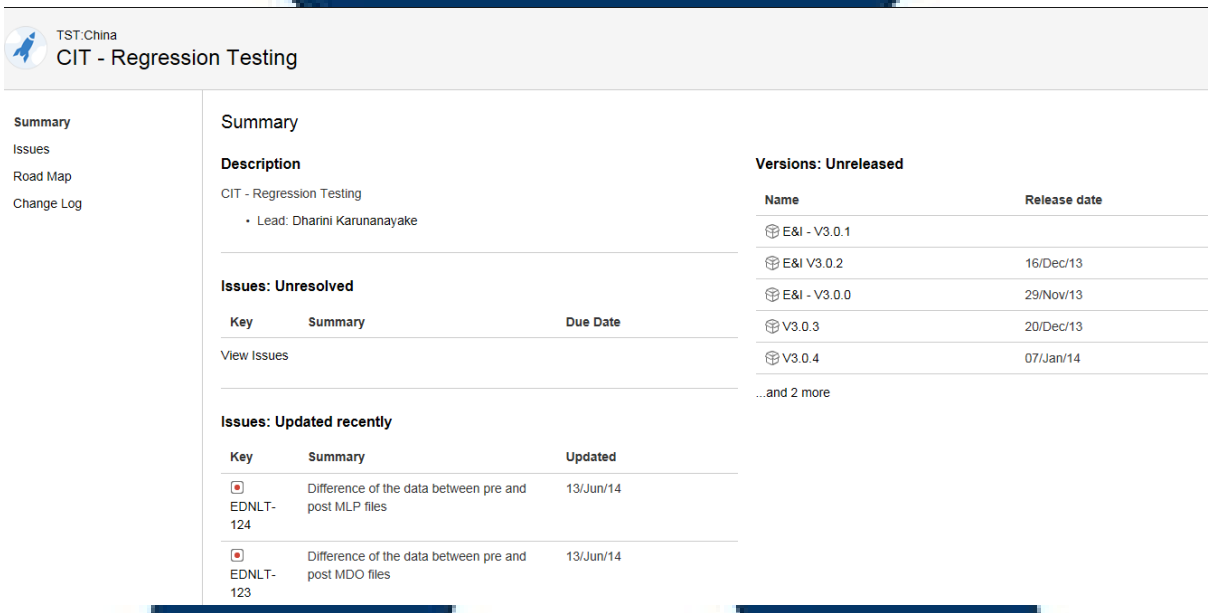
Browsing a Project's Components



Browsing a Project's Summary

Components option can be seen at the left hand pane under Overview tab. This option allows user to see different components in a project and issues that are logged under a specific component.

User can click on a particular component and this should take you to the issues logged under that component. Components are created for a project by the admin and while creating issues specific components are selected in the project.



Browsing a Project’s Summary

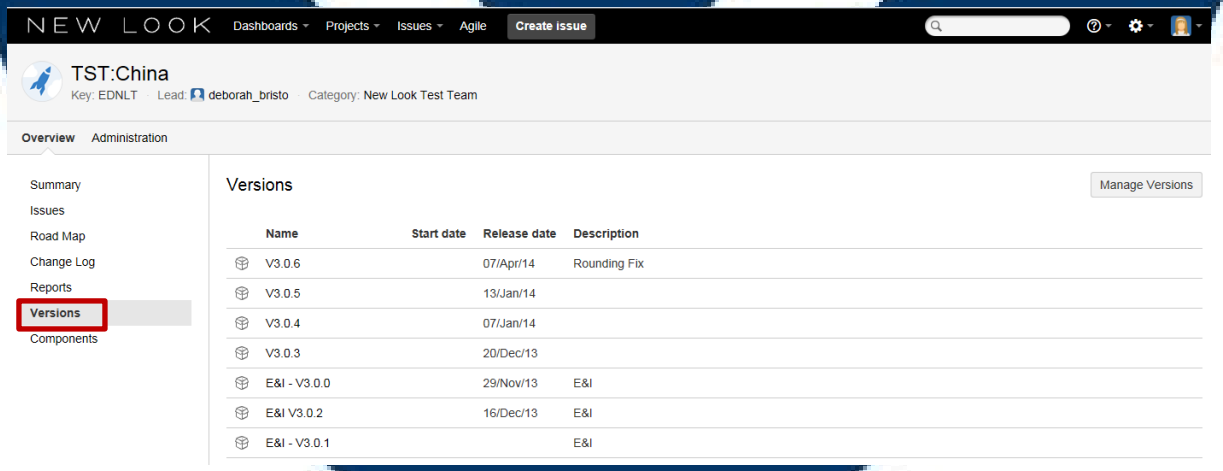
Browsing a Project's Versions

User can view the issues reported to a specific code/fix release version by browsing a project's versions.

Please see below screenshot where a user can browse a project's versions for the different issues reported in a project.



User should be able to see the below by browsing project's versions

- Version name
- Start Date
- Release Date
- Description

User can click into a specific version number/name to see all the issues that are reported for that release version
